DECLARATION

To,

The Principal,

A.R. Burla Mahila Varishtha Mahavidyalaya,

Solapur.

Dear Sir,

I, undersigned, hereby declare that the project title **"Burqa Shop Website"** Written and submitted under the guidance of **Miss. Bengiri G.A.** is my original work. The empirical findings in this report are based on the data collected by myself. While preparing this report, I have not copied from any others reports.

I understand that any such copying is liable to be punished in a way the university authorities may deem fit.

Date:

Place: Solapur

Name of Students: Signature

Miss. Mujawar Javeriya Fatima Md Masood

ACKNOWLEDEMENT

I feel immense pleasure in expressing my sense of gratitude to Miss. Bengiri G.A Head of Department, B.C.A. Department, for their active guidance and constant encouragement during the course my study.

I wish to take this opportunity to express my deep sense of appreciation and special thanks to Miss. Bengiri G.A. for providing necessary facilities.

I specially thanks to Miss. Bengiri G.A. for her practical assistance, active guidance and constant encouragement during the work.

Finally, I also thankful to all teaching and non-teaching staff of **A. R. Burla Mahila Varishtha Mahavidyalaya,** and my friends for their kind of co-operation.

1.1 Introduction to Project

The Burqa Shop Website is an e-commerce platform for Naqab Collection Shop that facilitates the sale of Islamic women's clothing, including Burqa, Abaya, Naqab, Hijabs, and accessories. The website provides a seamless and secure shopping experience with features such as product browsing, cart management, order processing, and user authentication. The system is designed to offer a user-friendly interface while ensuring efficient product and order management for the admin.

1.2 Introduction to Existing System

Currently, people who want to buy Islamic women's clothing must visit physical stores or browse multiple websites, many of which are unorganized and difficult to navigate. Customers struggle to find a single reliable platform that offers a variety of high-quality products in one place.

Many existing online stores also have security risks, slow checkout processes, and limited filtering options. Additionally, they often lack proper customer support, making it difficult for users to get help with their queries. Because of these issues, shopping for Islamic clothing online can be complicated and frustrating for customers.

1.3 Introduction to Proposed System

The proposed Naqab Shop Website solves these problems by offering a well-structured, secure, and easy-to-use platform for both customers and administrators. The system includes a strong database design, secure user authentication, and a smooth shopping cart and checkout process. The website will also have a responsive design, making it easy to use on both mobile and desktop devices.

1.4 Objectives of Proposed System

- Develop an online shopping platform for Islamic women's clothing.
- Provide a secure system for user registration and authentication.
- Make it easy for admins to manage products and orders.
- Create a smooth and efficient checkout process.
- Improve the shopping experience with search and filtering features.

1.5 Scope of Proposed System

- User Roles: Customers and Admins.
- Accessibility: Works on both mobile and desktop devices.
- Target Audience: Women looking for Islamic clothing.
- Scalability: Can expand to include more categories and payment options in the future.

2.1 Fact-Finding Techniques

The following methods were used to gather requirements for the system:

- Surveys and Questionnaires to understand customer expectations.
- Interviews with potential users and retailers.
- Observation of existing e-commerce platforms to find strengths and weaknesses.

Questionnaire:

1) How often do you shop for Islamic clothing online?
2) What challenges do you face while purchasing Islamic clothing online?
3) What payment methods do you prefer for online shopping?
4) Do you trust the security of existing e-commerce platforms? If not, why?
5) What features would you like to see in an online Islamic clothing store?
6) How important is customer support in an online shopping platform?
7) Do you prefer website or desktop shopping? Why?
8) What are the common issues you face while selling Islamic clothing online?
9) What improvements would you suggest for an online clothing store?
10) How do you currently manage your product inventory and orders?
11) What challenges do you face in managing customer queries and complaints?

By using these fact-finding techniques, we ensured that the system is designed based on real user needs and business requirements.

2.2 Feasibility Study

The feasibility study evaluates whether the proposed system can be developed successfully. It examines whether the project is practical from a technical, economic, and operational perspective.

2.2.1 Technical Feasibility & Hardware and Software Requirements

Technologies Used:

- Frontend: HTML, CSS, JavaScript.
- Backend: PHP.
- Database: MySQL.
- Server: Apache XAMPP.

Hardware Requirements:

- Hard disk: 500 GB
- RAM: 8 GB
- Operating system: Windows 10
- Processor: i3

Software Requirements:

- Operating System: Windows.
- Development Tools: VS Code.
- Database Management: MySQL Workbench, phpMyAdmin.
- Server Environment: XAMPP

2.2.2 Economic Feasibility

Economic feasibility determines if the project is affordable. The Burqa Shop Website mainly uses free and open-source technologies, making it cost-effective.

Development Costs is Low, as open-source tools are used. Since the system is built using free and low-cost technologies, it is financially feasible for small and medium-sized businesses.

2.2.3 Operational Feasibility

Operational feasibility ensures that the system is user-friendly and meets user needs. The Burqa Shop Website is designed to be easy to use for both customers and admins.

Key Features for Users:

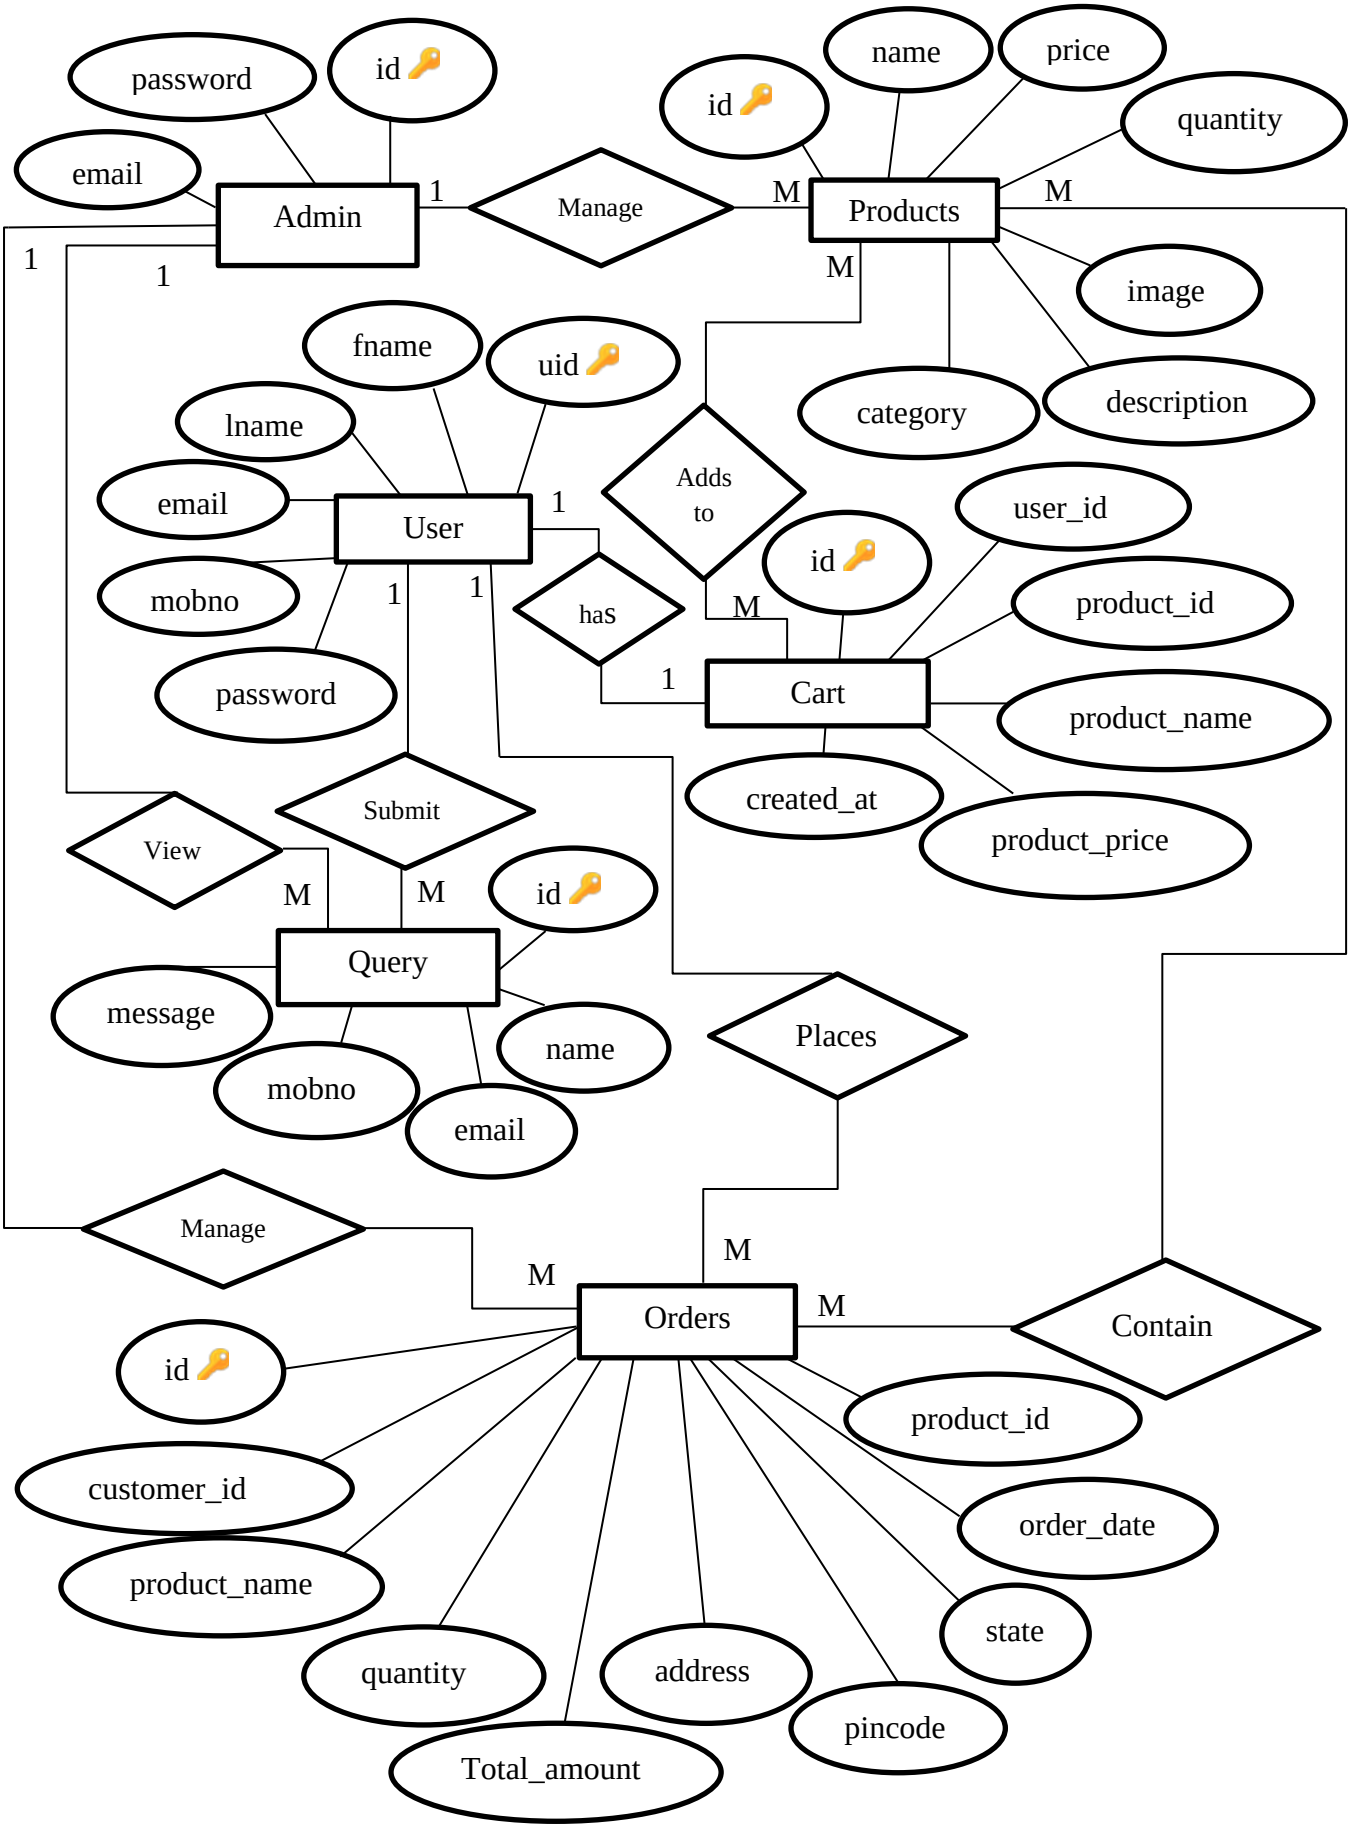

- Simple navigation for easy shopping.
- Secure login and account management.
- Easy-to-use shopping cart and checkout process.

Key Features for Admins:

- Product and order management tools.
- Customer query system.
- Scalability to add future features like payment gateways.

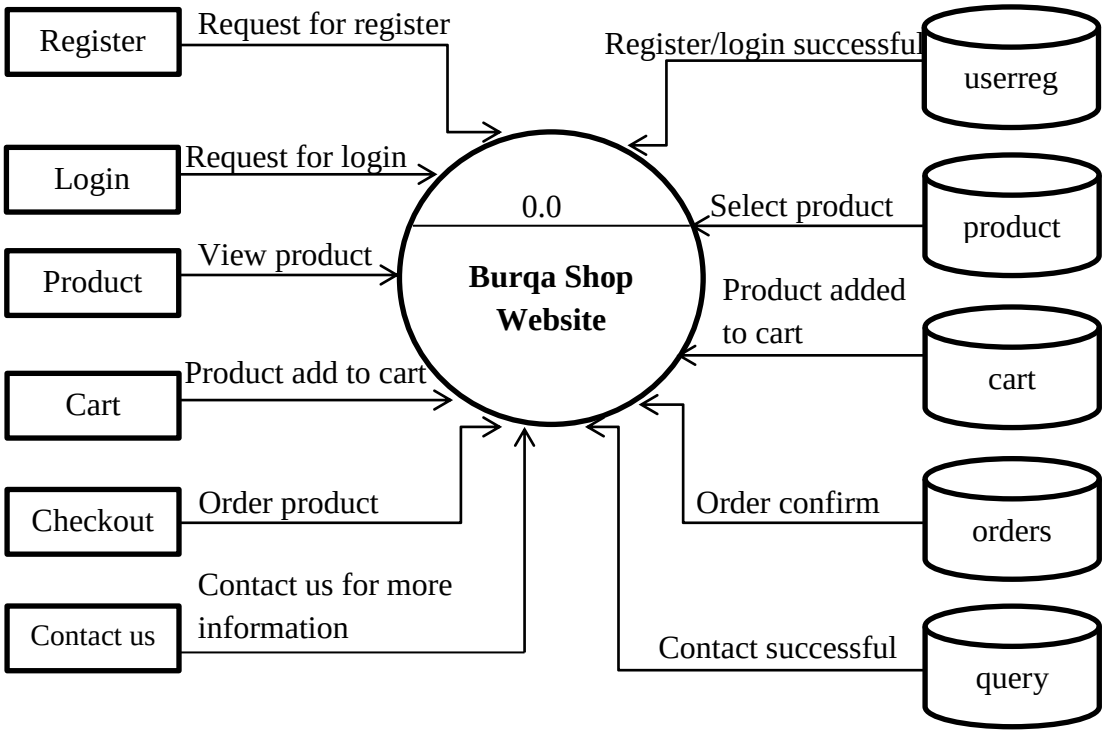

Since the system is easy to use and manage, it is operationally feasible for both customers and administrators.

Contact Us Queries

3.3 Reports

- Sales Report (Total revenue, orders per category).
- Product Report (Best-selling items, stock status).

4.1 Types of Testing

1. Unit Testing

- Testing individual components of your website (e.g., login, product listing, checkout).
- Ensuring PHP functions and database queries work correctly.

2. Integration Testing

- Checking if different modules (e.g., user authentication, product management, order system) work together.
- Verifying smooth data flow between the frontend and backend.

3. Functional Testing

- Ensuring the website's functionalities work as per the requirements.
- Examples:
  Users can register and log in.
  Products can be added to the cart and purchased.

4. Usability Testing

- Checking how user-friendly the website is.
- Ensuring easy navigation and clear UI/UX for customers.

5. Compatibility Testing

- Checking if the website works on different browsers (Chrome, Microsoft Edge).
- Ensuring mobile responsiveness.

6. Database Testing

- Ensuring correct data storage and retrieval in MySQL.
- Checking for data integrity and preventing redundancy.

4.2 Program Specifications & Validation

1. Home Page

- Checked for proper display of the website's name, logo, and navigation menu.
- Verified that featured products and categories load correctly.
- Ensured that all buttons and links redirect to the correct pages.

2. User Registration & Login Page

- Verified that users can register with valid details and receive confirmation.
- Checked that password encryption is applied for security.
- Ensured that incorrect login attempts show appropriate error messages.

3. Product Listing Page

- Ensured that all products are displayed with proper images, names, prices, and descriptions.
- Tested category and filter options to confirm they show the correct products.
- Verified that clicking on a product redirects to the product details page.

4. Product Details Page

- Checked that product information is displayed correctly.
- Ensured that the "Add to Cart" button functions properly.
- Validated that users can select product quantity before adding to the cart.

5. Shopping Cart Page

- Verified that added products appear in the cart with correct details.
- Checked the functionality of removing products from the cart.
- Ensured that the total price updates correctly when products are added or removed.

6. Checkout Page

- Tested the form validation for entering user details like name, address, and payment method.
- Ensured that incorrect or incomplete information prevents order submission.
- Checked that successful orders generate a confirmation message.

7. Order Confirmation Page

- Verified that users receive a confirmation message with order details.
- Ensured that the order is stored correctly in the database.

8. Admin Panel

- Checked login authentication for the admin.
- Verified that the admin can add, edit, and delete products.
- Ensured that order management functions correctly.
- Check the user information appear properly.
- Check the products categories are displayed properly.
- Ensured that products and sales reports appear properly.

5.1 Implementation

The implementation process involves setting up the development environment, coding, integrating features, and testing the system to ensure it functions correctly.

The following methods are used in Development Phase.

Setting Up the Development Environment:

- Installed XAMPP to run a local server for PHP and MySQL.
- Used VS Code as the primary code editor for frontend and backend development.
- Configured phpMyAdmin for managing the database.

Frontend Development:

- Designed the website structure using HTML and CSS.
- Used JavaScript for interactive features such as dropdown menus and form validation.
- Applied CSS media queries to ensure mobile responsiveness.

Backend Development:

- Developed the server-side logic in PHP to handle user authentication, product display, and cart management.
- Connected the MySQL database to store user details, products, and orders.
- Implemented session management to track logged-in users.

Database Implementation:

- Created tables for users, products, orders, and categories in MySQL.
- Established relationships between tables to ensure smooth data retrieval.
- Used SQL queries to insert, update, and delete records.

Integration of Features:

- Integrated user authentication to allow secure login and registration.
- Linked frontend and backend to fetch product details from the database.
- Implemented cart functionality, allowing users to add and remove products dynamically.
- Designed the checkout system, ensuring order details are recorded in the database.

5.2 User Manual

Customer Guide:

1) How to Access the Website
    a. Open a web browser.
    b. Enter the website URL (if deployed) or run it locally using XAMPP.

2) User Registration & Login
    a. Click on the "Register" button.
    b. Enter required details such as name, email, password, and phone number.
    c. Click "Submit" to create an account.
    d. To log in, enter your registered email and password.
    e. Click "Login" to access your account.

3) Browsing Products
    a. Navigate to the "Shop" section.
    b. Select a category (Burkhas, Abayas, Hijabs, Accessories).
    c. Click on a product to view details, including price and description.

4) Adding Products to Cart
    a. Click the "Add to Cart" button on a product page.
    b. View your cart by clicking the cart icon in the top menu.
    c. Update or remove items as needed.

5) Placing an Order
    a. Go to the Cart and review selected items.
    b. Click "Buy Now."
    c. Enter shipping details and choose a payment method.
    d. Click "Place Order" to confirm the purchase.
    e. A confirmation message will be displayed.

6) Viewing Order History
    a. Log in to your account.
    b. Navigate to "My Orders."
    c. View past orders and their status.

7) Troubleshooting
1. Login Issues
    a. Ensure the email and password are correct.
    b. Click "Forgot Password" if needed.
2. Page Not Loading
    a. Check your internet connection.
    b. Refresh the page or try reopening the browser.

3. Product Not Adding to Cart
    a. Ensure JavaScript is enabled in your browser.
    b. Try clearing cookies and cache.

Admin Guide

1) Admin Login
    a. Go to the Admin Panel Login Page.
    b. Enter admin credentials and click "Login."

2) Managing Products
    a. Navigate to the "Products" section.
    b. Add a new product by entering details such as name, price, and category.
    c. Edit or delete existing products as needed.

3) Managing Orders
    a. View placed orders in the "Orders" section.
    b. Update order status (Processing, Shipped, Delivered).

6.1 Future Enhancements

To improve the functionality and user experience of the Burqa Shop website, the following enhancements are planned for future development:

1) Online Payment Integration
   Currently, the website does not support online transactions. In the future, a secure payment gateway such as Razorpay, PayPal, or UPI will be integrated to allow online payments, ensuring a seamless and secure checkout experience.

2) Wishlist Feature
   A "Wishlist" option will be implemented to allow users to save products for later. This will improve the shopping experience by enabling users to revisit and purchase their favourite items anytime.

3) Order Tracking System
   A real-time order tracking feature will be introduced, allowing customers to check their order status (Processing, Shipped, Delivered) and invoice bill generation, SMS and email notifications will be sent for order updates.

6.2 Conclusion

The Burqa Shop Website successfully provides a secure, user-friendly, and scalable e-commerce solution for Islamic women's clothing.The Burqa Shop Website is a user-friendly e-commerce platform for Islamic women's clothing, built using PHP, MySQL, HTML, CSS, and JavaScript. This project enhanced my web development skills, improved our understanding of database management, and provided hands-on experience in e-commerce functionality.
